Customer No.: 31561 Application No.: 10/709,894 Docket No.: 12689-US-PA

AMENDMENTS

In the Claims:

1. (currently amended) A method of remotely managing a mobile communication device, comprising:

providing at least a short message, including an application program;

sending said application program to said mobile communication device; and

running said application program on said mobile communication device; and to

determine a position of said mobile communication device.

determining a position of said mobile communication device.

2. (original) The method of claim 1, wherein said step of providing at least said short message includes:

providing said application program; and enveloping said application program in said short message.

- 3. (original) The method of claim 2, wherein said step of enveloping said application program in said short message includes: when said application has a size larger than a capacity of said short message, dividing said application program into a plurality of program code portions, each of said plurality of program code portions having a size smaller or equal to said capacity of said short message in order to be enveloped in said short message.
- 4. (original) The method of claim 1, wherein said step of running said application program on said mobile communication device includes:

Docket No.: 12689-US-PA

receiving said short message;

extracting said application program when said short message includes said

application program; and

initializing an application program interface of said mobile communication device

to run said application program.

5. (original) The method of claim 4, wherein said short message includes an

identification index for determining whether said short message includes said application

program.

6. (previously presented) The method of claim 4, wherein said application

program and said application program interface comply with a Java 2 Micro Edition

(J2ME) standard.

7. (previously presented) The method of claim 4, wherein said application

program and said application program interface comply with a predetermined program

standard for said mobile communication device.

8. (original) The method of claim 1, wherein there is a plurality of short messages

and said step of running said application program on said mobile communication device

includes:

receiving said plurality of short messages;

determining whether any one of said plurality of short messages includes a portion

of said application program, when few of said plurality of short messages include portions

of said application program, extracting said portions of said application program;

reassembling each of said portions of said application program to recover said
